

# Hospitality POS SOLUTIONS

<b>Bar Tabs</b>	Bar Tabs work by offering your customers the choice of using a Bar Tab card each time they come to the bar to make a purchase.
<b>Bill Splitting</b>	Ideal POS System manages bill splitting seamlessly with the operator choosing to select specific items for separate payment.
<b>Customer Loyalty</b>	Ideal POS System's built-in Customer Loyalty is extremely versatile, allowing you to choose which POS terminals offer loyalty. Points can also be offered on specific items that might be part of a promotion.
<b>DVR Security Interface</b>	Send sales data 'Live' to Digital Video Recording equipment to match image data with POS transactions.
<b>Electronic Journal</b>	With Ideal POS System's Electronic Journal, you can quickly and easily recall the details of previous transactions. All sales transactions have a unique audit number, with the date, time and the name of the operator who processed the sale.
<b>Email Facility</b>	Customer Tax Invoices and Statements can be sent directly to your customers using Ideal POS System's built-in Email Server. Purchase Orders can also be emailed directly to your Suppliers.
<b>Employee Log</b>	Ideal POS System includes Employee Logging as standard with the ability to enter the average hourly rate for each staff member so you can compare your sales to your labour costs.
<b>Gift Vouchers</b>	Gift Vouchers can be sold with the dollar value and name recorded within Ideal POS System. Gift Vouchers can be partially redeemed and you can track unredeemed vouchers.
<b>Ideal Handheld</b>	Using our Ideal Handheld ordering software, you can take an order from your customers while they are sitting at the poker machine by swiping their membership card to earn points.
<b>Integrated EFTPOS</b>	Selected EFTPOS terminals can be interfaced directly to Ideal POS System to eliminate operator mistakes and improve speed of service.
<b>Item Alert Levels</b>	Ideal POS System will alert the operator when entering an order if an item is sold out.
<b>Kitchen Monitor</b>	Replace traditional Kitchen Printers with easy to read Kitchen Monitors. Summarise orders to quickly accumulate similar items.
<b>Kitchen Printing</b>	A wide range of both Serial and Ethernet thermal and dot matrix printers are supported including IdealPOS, Epson, Citizen, Star, Samsung and more.
<b>Menu Programming</b>	Ideal POS System steps the operator through menus, with the menu adjusting the price according to the number of selections made. This reduces the time taken to program the menu with all the unique options, and it is easy to maintain one set of products.
<b>MYOB Accounting Interface</b>	Send reconciled banking totals and supplier purchase data seamlessly to MYOB Accounting Software via a direct ODBC Database Connection. General Ledger accounts in MYOB are linked to Sales & Purchase Categories in Ideal POS System.
<b>Order Entry</b>	Ideal POS System supports various types of order entry, including sit down table service, pay at the counter, drive-through, beeper and order number stand entry.
<b>Peer-to-Peer Networking</b>	Using our very own IPS Client Software, a true Peer-to-Peer Networking Technology to synchronize POS Data across a Multi-Terminal POS Network.
<b>Promotions</b>	Promotions are a feature in the software that automatically applies a discount without the operator remembering to press a discount key at the end of the sale.
<b>Recipe Costing</b>	Calculate the cost of each meal by entering the recipes into Ideal POS System.
<b>RFID Clerk Security</b>	Set permissions by Clerk for specific types of functions including voids, refunds, discount, price over-rides and more. POS transactions are recorded for each Clerk in the Electronic Journal and Activity Log.
<b>Reservations</b>	Manage your reservations with Ideal POS System's fully integrated Reservations Module.

<b>SQL Database</b>	As standard, Ideal POS System runs in Peer-to-Peer mode using locally stored MS SQL Express Database. Larger sites can take advantage of Packet Filtering to prevent data being sent to various terminals.
<b>Stock and Sales Reports</b>	All reports are calculated in real-time providing the most up to date information. You can easily access historical data by entering a from-and-to date range, or selecting from the calendar.
<b>Stock Control</b>	Multi-Location Stock Control with data being sent in 'Real-Time'. You can do a partial stock-take and only count specific items, and/or stock-take one location at a time. Every completed stock-take is archived to allow you to go back and re-print your stock-take variance and valuation reports.
<b>Table Map</b>	With the Graphical Table Layout, you can see at a glance the status of each table.
<b>Table Server</b>	When a table is accessed in Ideal POS System, the table is locked to prevent other operators from deleting or transferring data from the table.
<b>Touchscreen Design</b>	You'll never run out of space or memory to program your entire menu into Ideal POS System.

## Idealpos IT Series POS Terminals

12" or 15" LCD Touch Panel

POINT OF SALE

## Smart Choice

You will be able to serve your customers faster and process orders from any terminal, even wireless handhelds. Ideal POS System is capable of tracking an unlimited number of different selling products; identify your best or worst sellers and profitable/non-profitable items. You will be able to control stock levels, automate re-order levels and update your selling prices without bringing the POS terminals offline.

Utilizing a dependable Microsoft SQL Database and a sophisticated Peer-to-Peer Networking Technology, Idealpos is the smart choice for your Business. The combined Idealpos Software and Hardware solution ensures a reliable, robust POS solution with an offering of various Idealpos Touch POS Terminals to choose from.

## POS Screen

Our experience has shown that businesses that upgrade from a conventional cash register with limited functionality to our advanced Ideal POS System instantly see an increase in their profits. Why? The reason is simple. We'll show you how to maintain and program your POS Screen layouts to suit your menu and meal options without complicating and increasing the time it takes to process an order. Your staff won't forget to charge for the extras or forget to 'upsell', as the POS terminal will guide them step-by-step through the choices to offer to your customers.

You can design the layout of the POS Screen to make it easy to use and allow you to serve your customers quickly and easily. You'll never run out of space or memory to program your entire menu into Ideal POS System. From the main screen, you can program up to 9 layers with 54 buttons on each layer. Each button can open up more lists of items and so on. Choose from alphabetically sorted menus, each with their own choice of back colour, font colour, font style and size. You can program new menus in advance and load them on the day your new menu is implemented. A breakfast, lunch and dinner menu can also be created to separate the items and only display which items can be sold for that time of the day.

## Kitchen Printing

Kitchen Printers are managed entirely within Ideal POS System, allowing notification of print jobs that have failed due to the printer running out of paper, a paper jam or if the power is switched off. The operator can choose from a list of backup printers to redirect the print job to. A wide range of both Serial and Ethernet thermal and dot matrix printers are supported including IdealPOS, Epson, Citizen, Star, Samsung and more. You can program an item to be sent to a maximum of six printers simultaneously with each POS terminal having its own kitchen printer options. For example, your restaurant may have an upstairs bar and downstairs bar, with each bar serving the same items, so depending on where the item was sold, Ideal POS System will direct the kitchen docket to the respective printer.

## Kitchen Monitor

With Ideal Kitchen Monitor you can display all your orders on one screen. The Orders can be resized to fit most Screen Resolutions and you have the option to summarise all orders to quickly add all similar items together. For Restaurant orders, you can split the order into Groups and bump them off the screen once they are prepared. Visual Alerts can be configured at various times to warn the Chefs when customers have been waiting for their meals for too long!

## Integrated EFTPOS

EFTPOS terminals can be interfaced directly to Ideal POS System to eliminate operator mistakes and improve speed of service. When customers choose to pay by EFTPOS, simply select an EFTPOS tender to finalise the sale and the EFTPOS software will complete the process and print the receipts. A cash-out question can be enabled for businesses who offer this facility.
